## Combination Switch ECS, ESC Series <br> Wet Locations <br> NEMA 3,3R,4,4X,7,9

## * Application

- Industrial areas such as chemical plants, oil and gas refineries, paint and vanish manufacturing plants, gasoline bulk loading terminals, grain elevators, grain processing industries, coal processing or handling areas where atmospheres may contain hazardous gases or dusts and arcing of enclosed devices must not ignite the surrounding atmosphere.
- Controlling and supplying energy to portable electrical devices such as motor generator sets, compressors conveyors, portable tools, etc.
* Features
- These are the combinations of meters, pilot lights (Single or double), Cam switches, Selector switches and Push button switches (single or double), the main enclosures of which are fitted to the terminal boxes of two or three gangs.
- This range of all units has complete interchangeability in the joints between the main enclosures and the terminal boxes, so that any combination is available. When a combination other than listed in the tables is required, specify the units to be combined.
- The flameproof enclosure are composed of the main body and cover with four hexagonal headed bolts.

## * Standard Materials

- Terminal Box: Cast aluminum alloy
- Main Enclosure : Die casting aluminium
- Pole : Steel pipe
- Base : Cast aluminium alloy

| Units | Specification | Electrical Ratings |
| :---: | :---: | :---: |
| Am-meter Volt-meter | -The Am-meters and Volt-meters are moving iron instruments with an accuracy class 1.5 <br> -Standard overload scales are max. 3 times <br> -On Am-meters for 1 and 5 Amp C.T connection |  |
| Pilot Lamp | -The pilot system based on the use of luminescent diodes as the lamp source. | LED : AC 110,220V/20mA max., DC24V Filament Lamp: AC 110,220V/3W |
| Cam Switch | -Cam Switches max 4 positions are available with conventional contactors or as a contact-free version. <br> -The contact arrangements can be selected, spring return or notched positions can be supplied (refer to contact arrangement on this page). | Contact Ratings <br> AC 110 V <br>  15 Amp. <br> 300 V 10 Amp. <br> 440 V 3 Amp. <br> DC 24 V 10 Amp. <br> 110 V 5 Amp. <br> 220 V 3 Amp. |
| Selector <br> Switch | -Selector switches max 4 positions are available. <br> -The switching arrangements can be selected, spring return or notched position are available. | AC 250V 5A Contact Rating. |
| Push Button Switch | -The standard contact block is double pole, 1 NC (Normally closed), and 1 NO (Normally Open contact) | AC 250V 5A Contact Rating. |

Explanation on Operating Diagrams in the Table
In the operating diagrams in the table above, the longitudinal dotted lines show the operating positions of switch, the small circles on the both ends of lateral line show the terminals, and the figures show the terminal numbers.
The marks showing the conditions of contacts at each operating position are explained as follows:

1. The contact between both terminals is closed at this position.
2. The contact is closed successively between the two positions.
3. $\leftarrow$ The mark of residual contact. The contact is closed when the handle is set to this position and keeps closed after the handle returns. The contact is open at the fine point of the arrow mark when the handle is operated in this direction.
4. $\leftarrow A$ The mark of spring return. The arrow mark shows the direction of automatic spring return form ' $A$ ' to the fine point of it.
